

Kretz AI Leadership and Governance: Participant Activity Handout

Use this handout during the hands-on portions of the session. The goal is not to become technical. The goal is to practice asking the right questions before Kretz uses AI in real work.

Core rule

AI can draft, organize, summarize, and compare. Kretz people still verify, review, approve, and own anything that matters.

Activity 1: Kretz DNA Assistant

Open the Kretz DNA Assistant or use regular ChatGPT with the facilitator prompt. Paste a rough outgoing message and review how the tool changes it.

Kretz DNA Assistant: <https://chatgpt.com/g/g-6a427b6a557c8191ab8ef594a604fa58-kretz-dna-assistant>

Try this sample

Hey, just following up about your property. We think there might be some timber value and can probably come out next week. Let us know.

Review questions

- What did the AI improve?
- What did it avoid promising?
- What would a Kretz person need to verify?
- Would this be safe to send as-is? Why or why not?

Activity 2: Kretz AI Decision Guide

Describe a real problem or repeated workflow. The Decision Guide should ask questions and recommend whether it should be AI, existing software, automation, a narrow Custom GPT, process improvement, vendor system, or no AI for now.

Kretz AI Decision Guide: <https://chatgpt.com/g/g-6a427f689a888191b03c01b5608f45ec-kretz-ai-guide>

Try one of these problems

- We need a better way to remind staff to follow up with landowners after calls.
- We want to turn rough landowner notes into a follow-up email and checklist.
- We need to compare grading technology vendors.
- We want better tracking for landowner, sales, and forestry follow-up.
- We want office staff to create better social posts without sounding generic.

Decision categories

Path	Best fit
Existing software first	Reminders, calendars, task tracking, templates, shared lists, simple workflow routing
Narrow Custom GPT	Repeated language-heavy tasks with Kretz voice, examples, boundaries, and human review
Automation/workflow tools	Triggers, routing, notifications, task creation, approvals, handoffs
Process improvement first	Unclear workflow, inconsistent inputs, missing owner, poor documentation
Vendor/enterprise system	CRM, system of record, audit trail, permissions, reporting, integrations
No AI yet	High-risk decisions, sensitive data, no review owner, safety/legal/financial/pricing/timber commitments

Activity 3: Upload a practice dataset

Download the synthetic dataset ZIP from the landing page. Choose one file and upload it to ChatGPT or use it with one of the GPTs. These are training files only, not official Kretz records.

- Landowner call notes: draft follow-up and identify review items.
- Customer inquiries: draft a response without inventing availability, price, or delivery.
- CRM sample: decide whether the workflow belongs in software, automation, Custom GPT, or process cleanup.
- Vendor research starter: create comparison questions and risk notes.
- Meeting notes: summarize action items and governance risks.

Governance checklist

- What data is involved?
- Is any data confidential, customer-specific, landowner-specific, pricing-related, timber valuation-related, employee-related, safety-related, legal, financial, or proprietary?
- Who reviews the output before it is used?
- Could the output create a promise or commitment?
- Who owns and maintains the tool or process?
- Should the first step be AI, existing software, automation, process cleanup, vendor review, or no AI?

Final reflection

Write one AI opportunity Kretz should explore and one governance rule that should come first.

Opportunity: _____

Governance rule: _____
